PETER OBIECHINA

Senior Flutter Engineer · iOS & Android

obiechinapeter2@gmail.com | linkedin.com/in/peter-obiechina | github.com/peterbrxwn | Abuja, Nigeria · Remote or relocation

SUMMARY

Senior Flutter engineer with 7+ years of Flutter experience, shipping commercial apps since 2017. Led development of Moniepoint's flagship banking app (20M+ monthly users, 99.9% uptime) and previously built Countly's Flutter and React Native SDKs on top of native iOS (Objective-C) and Android (Java) code. Former Google Cloud Developer Expert for Firebase. Strong on architecture, offline-first sync, real-time features, CI/CD and testing, with full-stack JavaScript experience and a background in penetration testing.

SKILLS

Mobile: Flutter, Dart, flutter_bloc, isolates, platform channels, native SDK bridges (Java, Objective-C), React Native, App Store & Play Store releases

Architecture & quality: Clean architecture, repository pattern, dependency injection, design systems, offline-first sync, TDD (unit, widget, integration), CI/CD (Codemagic)

Backend & cloud: Firebase (Firestore, Cloud Functions, Auth, FCM, Analytics, Dynamic Links, Realtime DB), Google Cloud, BFF APIs, WebSockets, Node.js, AWS, Redis, SQL

Web: JavaScript (ES6), TypeScript, React, Next.js, Angular, Electron, HTML5, CSS3

Other: Python, Django, PHP, Laravel, Java, Objective-C, penetration testing (Burp Suite)

EXPERIENCE

Senior Flutter Engineer — Moniepoint Inc — Remote · 2025 – Present

Apps: Moniepoint Personal · Moniepoint Business · MonieWorld · Monnify Merchant

- Led development and refactoring of Moniepoint's flagship Flutter banking app (20M+ monthly users, 99.9% uptime), improving scalability and long-term maintainability.
- Built Backend-for-Frontend (BFF) APIs with mobile-specific endpoints, cutting payload sizes by up to 30% and app startup time by 40%.
- Implemented app attestation to block tampered and redistributed builds; worked on core banking flows (authentication, money transfers) where security and reliability are critical.
- Architected real-time balance and transaction updates using WebSockets and silent push notifications.
- Architected offline-first flows with local caching and sync strategies for unreliable networks.
- Led migration from monolithic UI code to a reusable component library and design system (theme abstraction, atomic components).
- Introduced repository pattern, dependency injection, service locators and use cases to enforce separation of concerns; used isolates to keep the UI responsive during expensive work.
- Built the internal logging and analytics system and reusable packages such as liveness detection.
- Built Codemagic CI/CD for automated tests, code-quality checks and App Store / Play Store releases; led TDD adoption with unit, widget and integration suites across critical flows.
- Mentored engineers and raised code quality across the team; reduced crashes across devices.

Senior Software Developer — Countly — Remote · 2022 – 2025

Flutter SDK PRs · React Native SDK PRs

- Developed and maintained Countly's Flutter and React Native analytics SDKs, bridging the native Android (Java) and iOS (Objective-C) SDKs.
- Wrote automated unit and integration tests and test frameworks validating SDK behaviour across Flutter, React Native and native platforms.
- Optimized SDK performance for efficient data collection and minimal resource usage in client apps.
- Shipped new SDK features driven by user feedback and supported developers integrating the SDKs.
- Documented SDK features for external developers, maintained internal docs, and ran code reviews to keep standards high.

Google Cloud Developer Expert (Firebase) — Directly Inc San Francisco, CA · Contract · 2021

- Provided expert support to developers on Firebase (Cloud Functions, Firestore, Realtime Database, Analytics), diagnosing security and performance issues to root cause.
- Advised teams on optimizing Firebase configurations for scalability and cost; wrote documentation and tutorials; answered on Stack Overflow; escalated complex issues with Google Cloud.

Software Engineer — RealPany Ltd Nigeria · 2017 – 2021

fiber.ng · web.fiber.ng

- Led a team of 5 developers building Fiber, a cross-platform inventory management app for iOS, Android, Windows and web (Flutter, Firebase, JavaScript, Electron.js) with 50K+ downloads.
- Built barcode scanning, Bluetooth receipt printing (via platform channels to native), card-reader payment processing, in-app purchases and PDF generation.
- Delivered full offline mode with automatic sync and conflict resolution, plus multi-role access (admins, managers, staff, clients, suppliers).
- Wrote Firebase Cloud Functions in JavaScript and packaged the Windows desktop app with Electron.js; integrated Dynamic Links, analytics, in-app chat and notifications.
- Owned the lifecycle from ideation to release; mentored junior developers, ran code reviews and contributed to product roadmap planning.

PROJECTS

ping44.com — Real-time multiplayer game with voice chat. Built the game engines, a React + Redux frontend on a Firebase backend, audio chat with WebRTC / Agora SDK, Redis caching, and deployment on AWS Lightsail.

Open source & community — Demo apps kagi_demo (Flutter, Firebase, DI, build_runner), stroll_demo, cart_demo; Chrome extensions in JavaScript; Stack Overflow answers on Flutter, Firebase and flutter_bloc since 2021.

EDUCATION

B.Eng Civil Engineering — University of Nigeria, Nsukka 2012 – 2017

Second Class Honours, Upper Division

LANGUAGES

English (native) · French (conversational, B1)
